KWS SISKIN

Group 2 Winter Wheat
KWS Sterling x CPBT W134

- Excellent combination of yellow rust (9) and *Septoria tritici* (6.8) resistance
- Superb physical grain quality
- Vigorous growth habit with wide sowing window

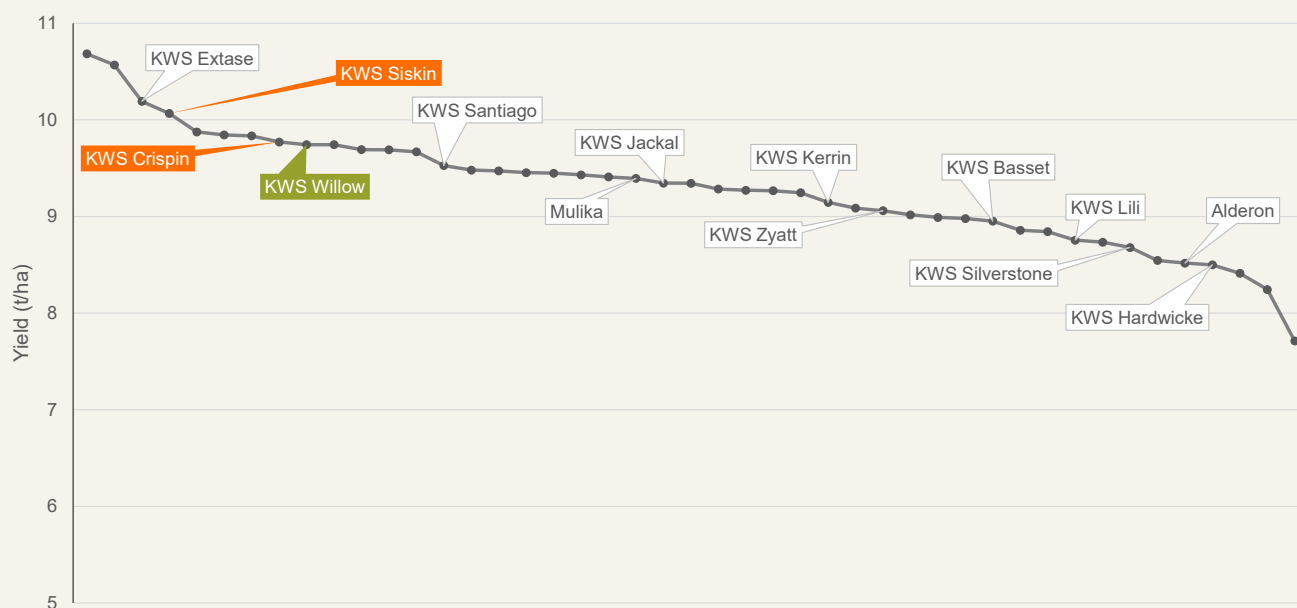

KWS Siskin is one of the most versatile wheats on the market today, making it suitable anywhere across the farm. Combining high yields, exceptional Hagberg (297), strong protein and its positive UKP status, KWS Siskin opens multiple end markets for farmers, unlocking premiums for their shed load of grain. In addition, time after time, it has proven its consistency across soil types, performing well as both a first and second wheat.

KWS Siskin has a strong disease resistance profile; its untreated yield (87% treated controls) is mainly due to its resistance to *Septoria tritici* (6.8) and yellow rust (9). Importantly, it is one of the few varieties on the current RL to have excellent resistance to yellow rust in both juvenile and adult plants.

What makes KWS SISKIN the wheat variety for you?

KWS Siskin is super versatile on farm, performing well across the rotation and in the later drilled slots.

KWS SISKIN yield performance

Yield	% treated controls
UK	99
East	99
West	99
North	99
Untreated	87
Light	99

Grain Quality	
Protein content (%) - Milling spec	12.4
Hagberg Falling Number	297
Specific Weight (kg/hl)	77.6

KWS SISKIN - Sowing for Peak Performance

80% of your crop's potential is locked in by the seed you buy and sow. While you can fine tune this with the correct nitrogen levels, using fungicides wisely to protect it from disease and paying attention to basic management principles, many attributes of your crop can't be changed. Therefore, it pays for you and your agronomist to make proactive choices before ordering a variety.

To get peak performance from KWS Siskin we recommend drilling in the following time window:

At KWS, we believe to get the best performance on your farm it is critical that when you choose your variety, you are using a wealth of data to tailor your choice for both your farm and individual field situation.
