

KWS TAYO

The most popular rye grown in the UK!

| KWS Tayo | |
|----------------------------------|------|
| Grain Yield | |
| Fungicide-treated (10.2 t/ha) | 104 |
| Disease Resistance | |
| Brown rust (1-9) | 7 |
| Agronomic Features | |
| Lodging (%) | [7] |
| Straw length (cm) | 131 |
| Ripening (days +/- SU Performer) | +1 |
| Grain Quality | |
| Protein content (%) | 9.0 |
| Hagberg Falling Number | 248 |
| Specific weight (kg/hl) | 76.3 |

All data taken from **AHDB Winter rye descriptive list 2024/25** unless otherwise stated

KWS Tayo is a market leading rye variety with high yields, strong brown rust resistance and good standing power.

Characteristics/Quality

- Market-leading hybrid variety
- Joint-highest grain yield on the 2024/25 Descriptive List
- Highest Brown rust rating on the DL

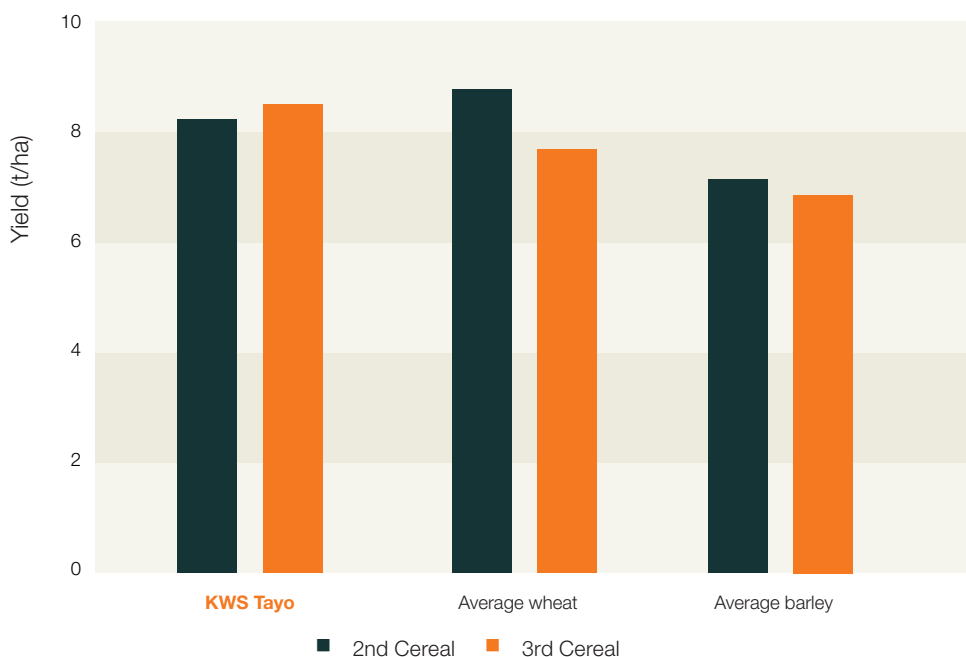

KWS Tayo is a multi purpose variety and can be used in a variety of scenarios from whole crop for Anaerobic Digestion to feed for pigs and poultry. Alternative markets in the food industry include: flour, breakfast cereals and distilling or malting.

With high grain and straw yields, with a robust disease profile, KWS Tayo offers a lot of potential to growers. KWS Tayo also has improved resistance to ergot thanks to PollenPLUS technology.

KWS TAYO yield performance

The graph below shows data from our product development site in Fowlmere. It highlights the adaptability of rye in the rotation, as either a 2nd or 3rd cereal. Data shows that rye provides good grain yields despite a lower nitrogen dose of 100kg nitrogen/ha vs. the wheat and barley at 180kgs nitrogen/ha.

This reduction helps bring financial savings when growing rye as well as other environmental benefits too, with less being lost to the local surroundings through leaching and helping improve the carbon foot print of the crop as well.

Data Source: KWS Own Trials 2023

What can hybrid rye offer growers?

KWS Group is the leading breeder of hybrid rye, with a long term hybrid breeding programme established in the mid-1980s. We offer varieties for wholecrop (as silage, or AD/biogas feedstock) or grain production (for feed grain, flour and distilling). KWS believes this highly productive cereal offers new perspectives for farmers and end-users alike. Thanks to its adaptability, hybrid rye has the potential to slot into most farming rotations.

Advantages of hybrid rye include:

- High yield potential
- Good 2nd or 3rd cereal option
- Higher straw yields compared to wheat or barley
- 25% lower water requirement than winter wheat
- Less nitrogen inputs
- Extensive rooting system
- Grassweed competition
- Low-risk from take-all and eyespot
- Multiple markets
