

# KWS KILBURN

Spring Wheat

(Paragon x W109) x Belvoir

SEEDING  
THE FUTURE  
SINCE 1856

## High yielding spring wheat

- Best brown rust score on the RL [8]
- Tall and very stiff
- Vigorous growth in early development

KWS Kilburn is a high yielding, spring sown, spring wheat producing very big ears and big, bold grain with excellent untreated yields ([80%] of treated controls).

Whilst a tall variety, it is very stiff and we've never seen it lodge. The height may, in part, explain its ability to do well sown in the spring, where it is better than most in these conditions. With a good balanced set of disease resistances, KWS Kilburn is also relatively easy to manage.

KWS Kilburn has an extremely competitive growth habit, as is demonstrated in Agrii's blackgrass trial at Stow Longa. With such a competitive nature it is the first step to 88% blackgrass cultural control.

Winter Wheat & Spring Wheat Late Autumn Drilled Crop  
Blackgrass Competition Trial

Data source: Agrii competition trial at Stow Longa, drilled 29/10/14 - difference between untreated and fully treated varieties 17/06/15
