## Because markets can change

DYNAMIC  
WHEATS

- Group 2 breadmaking quality
- High yields, especially in the North
- Consistent across regions and soil types

KWS Lili is a high yielding breadmaking wheat which has superb domestic and export potential. It has robust agronomic characteristics including a solid disease resistance package and excellent standing ability.

It has performed well in the mill and it ticks their boxes for Hagberg and specific weight and, while being on the lower end of their specifications for protein (11.6), it has produced good loaf volumes at these levels. It is perfect for growing for low grade milling and domestic demand 12.2% protein contracts for ukp cargoes.

KWS Lili is a relatively high tillering variety suiting most situations. It has good resistance to most diseases including an all important, 5.9 rating for *Septoria tritici* plus an 8 for mildew and 6 for yellow rust.

Rated 8 for lodging with PGRs KWS Lili is relatively short and stiff and stands well in the field. Two days behind Skyfall. It is a later maturing wheat which can help spread workloads at harvest.
