KWS CRANIUM

Group 4 Winter Wheat
KWS Crispin x KWS Kielder

- Exceptionally stiff strawed
- The specialist Wheat for later drilling
- Excellent combination of yield, yellow rust and OWBM resistance

KWS Cranium is a hard Group 4 wheat that offers farmers the ultimate tool in risk management, thanks to its ability to perform well in all of the major situations that significantly impact yield.

Suited to the mainstream sowing slots, KWS Cranium really excels in late drilling where it has shown some real consistency. Add good performance in the first and second wheat slots and you have a variety that is really flexible for many farming situations.

The variety has a good disease package with good *Septoria tritici* (5.7) which gains in value in

later drillings and decent brown rust and mildew resistance too.

Critically, KWS Cranium adds seedling and adult yellow rust resistance 9 to the hard Group 4 sector. This, in combination with its high yields, OWBM resistance and substantially stiffer straw than even the best varieties on the RL, makes KWS Cranium a 'no-brainer' choice for your farm.

As a later maturing type (+3), KWS Cranium can help spread the workload at harvest. The variety delivers a reliable grain package with good HFN (293) and a specific weight (75.8kg/hl).

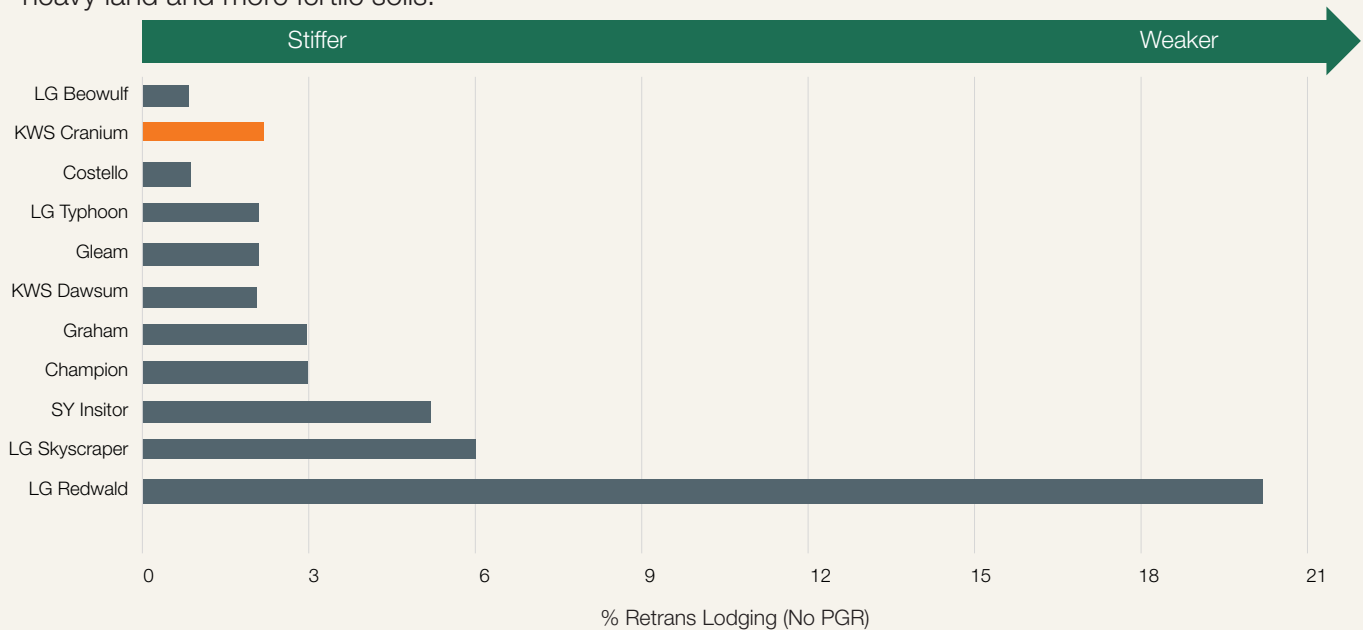

RECOMMENDED

UKFM
Group 4

What makes KWS CRANIUM the wheat variety for you?

KWS Cranium is incredibly stiff strawed, compared to leading feed varieties making it a firm favourite for heavy land and more fertile soils.

KWS CRANIUM yield performance

KWS Cranium is a rotationally robust variety doing well across a range of sites and situations; this maximises flexibility at drilling.

Yield	% treated controls
UK	101
East	101
West	100
North	103

KWS CRANIUM - Sowing for Peak Performance

80% of your crop's potential is locked in by the seed you buy and sow. While you can fine tune this with the correct nitrogen levels, using fungicides wisely to protect it from disease and paying attention to basic management principles, many attributes of your crop can't be changed. Therefore, it pays for you and your agronomist to make proactive choices before ordering a variety.

To get peak performance from KWS Cranium we recommend drilling in the following time window:

At KWS, we believe to get the best performance on your farm it is critical that when you choose your variety, you are using a wealth of data to tailor your choice for both your farm and individual field situation.
