

FREDERICO KWS

Energy: FAO 250

SEEDING
THE FUTURE
SINCE 1856

Unsurpassed yield potential for all mainstream sites with later harvesting

Characteristics / Quality

- Heavy yield potential (60 - 64 t/ha +)
- Excellent early vigour
- High volume plant type
- Safe maturity for the majority of mainstream sites (27 -31% DM)
- Recommended chop length: 7-9 mm
- Recommended seed rate: 42,000 seeds / acre (103,000 seeds / hectare)
- In low rainfall areas: 38,000 seeds / acre (94,000 seeds / hectare)

Data source: KWS Agroservice 2013 – 2014

FREDERICO KWS offers maximum yield performance on light soil types – ideal for late harvesting and the lowest cost per tonne.
