Ultra Early – Short Season

KWS TEMPRANO FAO 150

EnergyBOOST

SEEDING THE FUTURE SINCE 1856

KWS

In Your Field…

KWS TEMPRANO delivers extreme earliness, whilst providing class leading dry matter and starch yields in the Ultra Early – Short Season segment.

Highly suited to short growing windows, especially on less favourable maize growing sites.

Always finishes on time!

FORAGE

BIOGAS

Characteristics / Quality

- Outstanding, and class leading yield for an Ultra Early – (16.3 t/ha DM)
- Improved genetics deliver an additional 0.7t DM/ha yield
- Super early short season hybrid
- Exceptional starch content (39.8%)
- Highly suited for diets with 50% or lower maize inclusion
- Superb early vigour (7.0) suitable for early or late drilling
- Rapid dry down ensures early harvest
