KWS

New High Yielding Hybrid

- High yielding hybrid from KWS
- Excellent stem stiffness
- Strong disease package

Hermione is a very high yielding addition from the KWS Momont breeding programme.

It has a solid agronomic package with very stiff straw and excellent resistance to lodging. Hermione has medium/late flowering with medium maturity.

In terms of disease, Hermione has good resistance to light leaf spot (6), excellent resistance to stem canker (8) and shows very good tolerance to verticillium stem stripe.

Hermione			
Overview			
Variety type	Conventional		
	UK	E/W	N
Gross output	104	104	101
Seed yield	103	103	101
Agronomy			
Shortness of stem	6		
Resistance to lodging	[8]		
Stem stiffness	9		
Earliness of Flowering	5		
Earliness of Maturity	4		
Oil content (%)	45.8		
Disease			
Light leaf spot	6		
Stem canker	8		

Data sources: Winter oilseed rape varieties grown in RL trials in 2020 but not added to the AHDB Recommended List
