

High yield with **great** **disease resistance!**

CODEX

Oilseed Rape

Variety Type: Conventional

National listed

- Very vigorous autumn growth and good spring vigour
- Excellent resistance to stem canker (RLM7) and good resistance to LLS
- Good resistance for lodging with stiff straw

Codex is a high yielding conventional variety well suited to the mainstream OSR growing areas of the UK. It's gross output at 101% is on a par with Campus.

The stand out feature of Codex is it's excellent resistance to stem canker, rated at a 9. This is backed up by good resistance to LLS and tolerance to verticillium stem stripe.

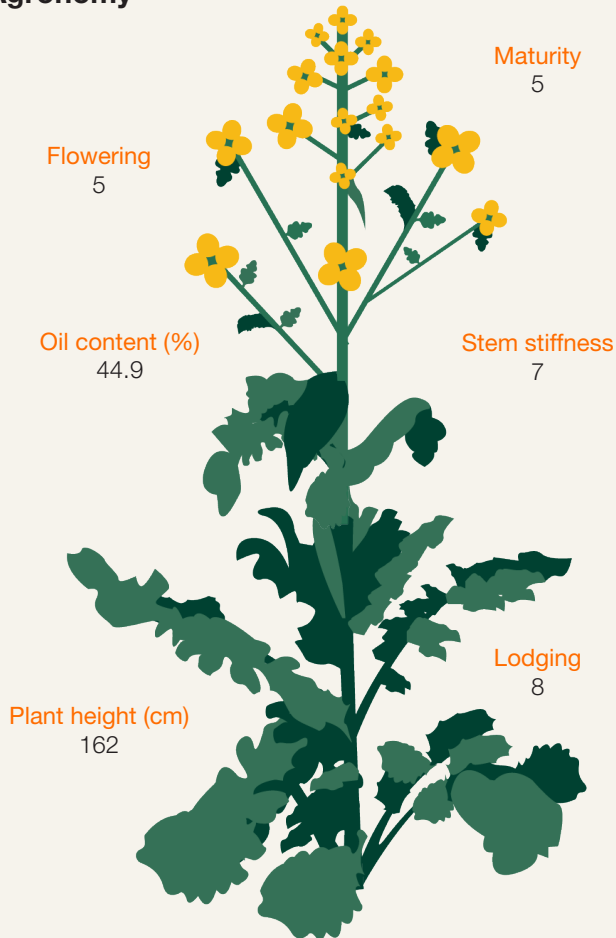

Codex has very vigorous autumn growth, a key attribute for growers in the fleabeetle hotbed of East Anglia. It has very good resistance to lodging and stiff straw.

Codex is marketed on the KWS Oilseed Establishment Partnership (OEP).

Why you should grow CODEX

Codex is an excellent all round variety and has the benefit of being marketed on the KWS OEP.

The KWS OEP offers a practical solution to growers with concerns around the establishment of oilseed rape crops. The OEP shares the risk of establishment between the grower, merchant and breeder. The initial seed cost is lower for the grower, allowing better cashflow and the opportunity for flexible seed rates.

For more information on the KWS OEP, please visit our website.
