

The high gross output Hybrid!

HANNELI

Oilseed Rape

Variety Type: Hybrid - Candidate

- Excellent disease package
- Very strong autumn vigour
- Good resistance to lodging and standing ability

Hanneli is a candidate for addition to the RL for the East/West region in autumn 2022. It is one of a new generation of hybrids from KWS which include the 'bolt on' traits that the innovative farmer expects.

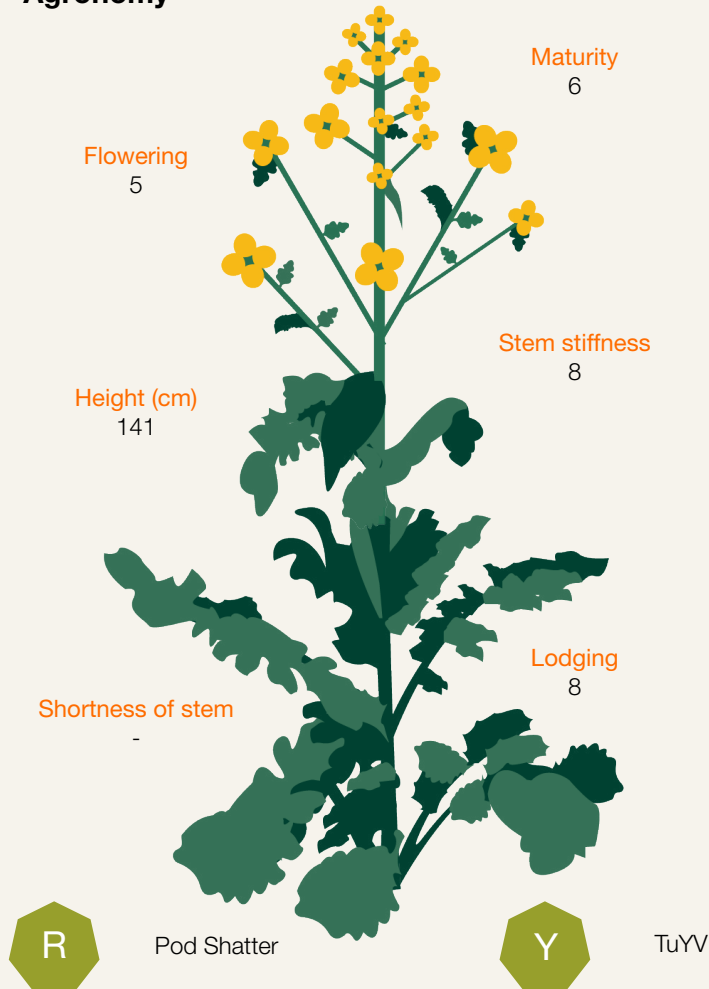

Hanneli is a high gross output variety with very strong autumn and spring vigour. It is a short strawed variety with good resistance to lodging and standing ability. It has medium flowering and maturity and has the PoSh gene.

Hanneli has an excellent disease package with a 7 for LLS and an 8 for stem canker (RLM7). It also has very good tolerance to verticillium stem stripe and TuYV.

HANNELI in a nutshell

Disease Resistance

Data sources: AHDB Recommended List, disease resistance score 0-9
* KWS Internal scoring (out of 5) for Verticillium Stem Stripe Tolerance

Why you should grow HANNELI

Breeder, Marie-Aude Vanhersecke comment:

"Hanneli has an outstanding disease profile: excellent stem canker with a single Rlm7 gene resistance, very good resistance to light leaf spot and a strong tolerance to TuYV"

"So Hanneli is a variety which has many characteristics that secure the yield under stressful growing conditions throughout the year: at emergence with the fast growing, during the main growing period with good disease resistance and at harvest with the very good pod shatter resistance."
